

Don't Rush to Flush!

Some things just don't belong down the drain.

If garbage is flushed, it doesn't just go away. Wastewater treatment plants rely on tiny microorganisms to break down waste, but they can't digest plastics, latex or rags.

These items can block sewer pipes and cause problems at the wastewater treatment plant.

Never flush plastic, wipes or anything that is not easily dissolved in water. Remember, toilets are not garbage cans.

When in doubt, throw it out!

For more information on proper waste disposal, visit wlssd.com or call the WLSSD Hotline at 218-722-0761.
